PROFESSIONAL SUMMARY

Backend engineer with 5 years of experience building reliable APIs and data-intensive services for B2B SaaS products. Strong in Python, FastAPI, PostgreSQL, asynchronous job processing, and test automation. Known for turning ambiguous product requirements into observable, maintainable systems and for improving production stability through disciplined incident analysis.

CORE SKILLS

Languages Python, SQL, TypeScript, Bash	Backend FastAPI, Django, REST, OpenAPI, Pydantic	Data PostgreSQL, Redis, SQLAlchemy, pgvector
Cloud & DevOps AWS, Docker, GitHub Actions, Linux	Quality Pytest, contract testing, mypy, Ruff	Practices TDD, code review, observability, incident response

PROFESSIONAL EXPERIENCE

Backend Engineer | Northstar Commerce Labs

Seoul, Republic of Korea | March 2023 - Present

- Designed and delivered FastAPI services supporting 1.2 million monthly requests for merchant analytics and order operations.
- Reduced p95 API latency from 780 ms to 310 ms by replacing repeated ORM queries with indexed PostgreSQL projections and cache-aware reads.
- Introduced idempotent background jobs and retry policies, cutting duplicate settlement events by 92 percent.
- Built contract and integration test suites that increased critical-path coverage from 61 to 87 percent and prevented three recurring production regressions.
- Led incident reviews with product and infrastructure teams and created dashboards for queue lag, error rate, and job completion time.

Software Engineer | Harborline Systems

Vancouver, Canada | July 2020 - February 2023

- Developed REST APIs and PostgreSQL schemas for a logistics planning platform used by 40 regional operators.
- Implemented asynchronous document processing with Redis queues, structured status tracking, and safe failure recovery.
- Automated CI quality gates for tests, type checking, linting, and database migrations, reducing release verification time by 45 percent.
- Partnered with frontend engineers to define OpenAPI contracts and resolve pagination, validation, and ownership edge cases.

SELECTED PROJECTS

Interview Preparation Service

Created a document-driven interview preparation API using FastAPI, PostgreSQL, object storage, and structured language-model outputs. Implemented ordered interview questions, atomic answer linkage, retryable processing jobs, and end-to-end tests across authentication, storage, database, and workers.

Operations Metrics Pipeline

Built a Python ingestion pipeline that normalized delivery events from multiple vendors and produced daily reliability metrics. Added data-quality checks, backfill controls, and traceable correction logs.

EDUCATION & CERTIFICATIONS

B.Sc. in Computer Science

Simon Fraser University, Canada | 2020

AWS Certified Developer - Associate

Amazon Web Services | 2024

LANGUAGES

English - Native | Korean - Professional working proficiency | French - Conversational
